# Fukaya Categories And Picard-Lefschetz Theory (Zurich Lectures In Advanced Mathematics)

## Synopsis

The central objects in the book are Lagrangian submanifolds and their invariants, such as Floer homology and its multiplicative structures, which together constitute the Fukaya category. The relevant aspects of pseudo-holomorphic curve theory are covered in some detail, and there is also a self-contained account of the necessary homological algebra. Generally, the emphasis is on simplicity rather than generality. The last part discusses applications to Lefschetz fibrations, and contains many previously unpublished results. The book will be of interest to graduate students and researchers in symplectic geometry and mirror symmetry.

## Book Information

Series: Zurich Lectures in Advanced Mathematics

Paperback: 334 pages

Publisher: European Mathematical Society (June 15, 2008)

Language: English

ISBN-10: 3037190639

ISBN-13: 978-3037190630

Product Dimensions: 0.8 x 6.8 x 9.5 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)
