Customer Reviews

Dana Oakes: Mr Oakes is currently an Educational Consultant and was formerly Director of Respiratory Care, VA Medical Center, Washington, D.C.; Educational Coordinator/Instructor, Respiratory Care Department, Children's Hospital National Medical Center, Washington, D.C.; and Director of Clinical Education, Respiratory Care Program, Columbia Union College, Takoma Park, MD. Mr. Oakes has been in the Respiratory field for over 30 years and has over 14 years of teaching experience including one-, two-, and four-year advanced Respiratory Care programs. Scot Jones: Mr. Jones is currently a Respiratory Supervisor in a progressive respiratory therapy department at Vidant Medical Center, a 900+ bed academic hospital in eastern North Carolina. His passion for education is combined with his own ongoing need for the perfect pocket reference in various clinical scenarios. His daily experience with therapists of all experience levels helps further shape and define Oakes' Pocket Guides.

While it is extremely helpful to have all your required RT related values in a handy dandy, tiny book... Oakes has some weird values. They are not always compatible to NBRC standards, which I think should be the KEY! The values are "close enough" but you know how these tests are... There are a few discrepancies, though. I can't remember the page number exactly, but Oakes has two

different suction pressure ranges listed as acceptable.

I recently graduated from my respiratory program and I thought this would be a great tool to have with me on clinical rotations. I know it says pocket book but honestly it is too big to actually carry in a pocket. It is like a little binder with metal rings and tabs for each section. I think the material is good and a good resource just wish it was thinner.

Bought for personal reference

Every RT student must have their Dana Oakes book with them at clinicals. I look at mine several times a day. I especially like the ABG interpretation and pharma sections.

anybody going to school to become an RT should get this. it's small enough to carry around and to study whenever you have any downtime. everything is neatly organized into tabbed chapters and it has a comprehensive index at the back.

I'm a respiratory student and it was suggested to me that I purchase this book. All I have to say is I love it. Has a lot of information packed into a small spiral book. Makes finding information quick and easy.

I just began my first semester in the RST program this book everything I need and I use it to clarify what I don't understand when in class.

Great info and pocket sized, fast delivery.
